# High performance – easy to use

Softpay

Softpay is a mobile application for Android devices, transforming any ordinary phone or tablet into a mobile contactless payment terminal. As something new and revolutionary, the solution supports transactions both with and without PIN. Thus, there is no limit to the amount a consumer can buy for at the same time.

The application can be integrated into an ECR-application through Softpay SDK or used as a standalone solution. As an integrator, Softpay offers you the opportunity to integrate directly with the Softpay application through an API that lets you create an ECR-application or reuse one that is already exisiting.

Softpay offers a secure, reliable and user-friendly solution on your own Android device, without having to purchase any additional hardware. It will no longer be necessary to have a terminal if all you need is to accept contactless payments.

I time, the solution will also support QR-payments.

Features
- Transactions with and without PIN
- Refunds and cancellations
- Loyalty (Storebox)
- Transactions overview in app
- Supports: Visa, MasterCard, and Dankort

Requirements for Android devices
- Android 8 or newer
